

3D Printing Rules

Our rules are designed to increase access to 3D printing, encourage original design and creativity, encourage eco-friendly practices, and cut down on unsuccessful prints.

Getting started:

- ✓ You must finish the identity token tutorial on our website and agree to these rules before you start printing.
- ✓ If you don't follow these rules, you might not be allowed to use the 3D printers anymore. Staff always has the final say on printing.
- ✓ If there is a problem with the printers, please tell a staff member right away.

What you can print:

- ✓ You can print ready-made designs (like those you find online) that take under four hours.
- ✓ You can print your own designs that will be done by 9AM the following day.
- ✓ Longer prints require the permission of the Makerspace Librarian. We are more likely to say yes to prints you have designed, improved through trial and error, or that have a significant purpose.
- ✓ Absolutely no weapons, weapon parts, items that look like weapons, or anything that is copyrighted.

Printing process:

- ✓ Printers are available on a first-come, first-served basis, or you can reserve some online through our website.
- ✓ Ask staff to assign you a printer. Only print on your assigned printer.
- ✓ Prints must be checked and approved by staff before being sent to the printer.

When a print fails:

- ✓ When a print fails and you want to re-print it, please fill out a "print failure report" explaining why you think it failed and what you are doing to make it print successfully. Give this to staff when you are ready to try again!
